## ISATUXIMAB/CARFILZOMIB/DEXAMETHASONE

### Name of the regimen and cancer drugs

- Isatuximab-irfc (I suh TUK sih mab): Sarclisa®
- Carfilzomib (kar FIL zoh mib): Kyprolis®
- Dexamethasone (DEK suh MEH thuh sone): Decadron®

### Common uses

This regimen is most commonly used for treatment of adult patients with relapsed or refractory multiple myeloma but may be used for other treatments.

### Treatment schedule

Your treatment will be given into your vein through an intravenous (IV) line. This may be into a short, flexible temporary catheter in your arm, or through a central venous catheter. A central venous catheter, or central line is a long, flexible IV tube that empties into a very large vein next to the heart. Talk with your care team to see which will be best for you and your treatment.

Each isatuximab-irfc, carfilomib, dexamethasone treatment is repeated every 28 days. This is known as one cycle. Your treatment will keep going until the drug, or drugs, stop working or you have side effects which stop you from continuing treatment.

- Isatuximab-irfc IV given on days 1, 8, 15, and 22 during cycle 1. Then it is given on days 1 and 15 during cycles 2 and beyond.
- Carfilzomib IV given days 1, 2, 8, 9, 15, and 16 during each cycle.
- Dexamethasone or IV given on days 1, 2, 8, 9, 15, 16, 22, and 23 during each cycle.

#### Cycle 1:

Drug	DAY	1	2	...	8	9	...	15	16	...	22	23
Isatuximab-irfc												
Carfilzomib												
Dexamethasone												

#### Cycle 2 and beyond:

Drug	DAY	1	2	...	8	9	...	15	16	...	22	23
Isatuximab-irfc												
Carfilzomib												
Dexamethasone

## ISATUXIMAB/CARFILZOMIB/DEXAMETHASONE

### Other medications

Other medications may be ordered for you to prevent or treat certain side effects. These include:

	Instructions:
<b>Anti-nausea and other medications</b>	<p>You will receive medications to prevent nausea just before your cancer treatment. You may also get prescriptions for other medications to take at home, as below:</p> <hr/> <hr/> <hr/> <hr/>
<b>Infection prevention</b>	<p>There is a risk of serious infections during treatment. You may receive medications to prevent infection in the hospital, and may also get prescriptions for medications to take at home for infection prevention, as below:</p> <hr/> <hr/> <hr/> <hr/>

### Possible drug interactions

- Isatuximab-irfc, carfilzomib, dexamethasone may interact with other drugs you are taking. Please inform your care providers of all prescription medicine, over-the-counter medications, vitamins, and herbal products that you take.
- Talk with your care provider or pharmacist before taking new medications, supplements, or receiving any vaccines.
- Grapefruit or grapefruit juice may interact with dexamethasone. Avoid eating or drinking these during your treatment.

## ISATUXIMAB-IRFC/CARFILZOMIB/DEXAMETHASONE

### Common Side Effects

Common side effects that have been known to happen in patients receiving isatuximab-irfc, carfilzomib, and dexamethasone are listed in the left side of this table. In some instances, the side effects may be reported less often but are still important to discuss. This table does not list all the known side effects for this therapy, only the ones that are experienced most often. Not every patient experiences every known side effect of a drug; even if you are taking the same drug as another patient, you may experience different side effects. Options to help manage any side effects that do occur are included on the right side of this table. These should be discussed with your care provider. If you experience any side effect you cannot manage or that is not listed here, contact your care provider.

Possible Side Effect	Management
<p><b>Decreased white blood cells (WBCs) and increased risk for infection</b></p>	<p>Your WBCs should be monitored by a simple blood test. When your WBCs are low, you are at a greater risk of having an infection. Take the following precautions to protect yourself from infection.</p> <ul style="list-style-type: none"> <li>• Wash your hands often, especially before eating and after using the bathroom.</li> <li>• Avoid crowds and people with fevers, flu, or other infection.</li> <li>• Bathe often for good personal hygiene.</li> </ul> <p>Contact your care team if you experience any signs or symptoms of an infection such as:</p> <ul style="list-style-type: none"> <li>• Fever (temperature more than 100.4°F or 38°C)</li> <li>• Chills</li> <li>• Sore throat</li> <li>• Burning when peeing</li> <li>• Tiredness that is worse than normal</li> <li>• A sore that becomes red, is draining, or does not heal</li> </ul> <p>Check with your care team before taking any medicine for a fever or chills.</p>
<p><b>Decreased platelet count and increased risk of bleeding</b></p>	<p>Your platelets should be monitored by a simple blood test. When they are low, you may bruise or bleed more easily than usual.</p> <ul style="list-style-type: none"> <li>• Use caution to avoid bruises, cuts, or burns.</li> <li>• Blow your nose gently and do not pick your nose</li> <li>• Brush your teeth gently with a soft toothbrush and maintain good oral hygiene</li> <li>• When shaving use an electric razor instead of razor blades</li> <li>• Use a nail file instead of a nail clippers</li> </ul> <p>Call your care team if you have bleeding that won't stop. Examples include:</p> <ul style="list-style-type: none"> <li>• A bloody nose that bleeds for more than 5 minutes despite pressure</li> <li>• A cut that continues to ooze despite pressure</li> <li>• Gums that bleed a lot when you floss or brush</li> </ul> <p>Seek medical help right away if you have any severe headaches, blood in your urine or stool, coughing up blood, or bleeding that you cannot stop or lasts a long time.</p> <p>You may need to take a break or “hold” your medication for medical or dental procedures. Talk to your care team or dentist before any scheduled procedures.</p>

## ISATUXIMAB/CARFILZOMIB/DEXAMETHASONE

Possible Side Effect	Management
<p><b>Decreased hemoglobin, part of the red blood cells that carry iron and oxygen</b></p>	<p>Your hemoglobin should be checked by a simple blood test. When your hemoglobin is low, you may notice that you get tired or fatigued more easily.</p> <ul style="list-style-type: none"> <li>• Try to get 7 to 8 hours of sleep per night</li> <li>• Avoid operating heavy machinery if you feel too tired</li> <li>• Find a balance between “work” and “rest”</li> <li>• Stay as active as possible, but know that it is okay to rest as needed, too</li> <li>• You might notice that you are more pale than usual</li> </ul> <p>Let your care team know right away if you have:</p> <ul style="list-style-type: none"> <li>• Shortness of breath</li> <li>• Dizziness</li> <li>• Fast or abnormal heartbeat</li> </ul>
<p><b>Lung (respiratory tract) infection</b></p>	<ul style="list-style-type: none"> <li>• Wash your hands often, especially before eating and after using the bathroom</li> <li>• Avoid people with fevers, flu, or other infections</li> <li>• Bathe often to keep good personal hygiene.</li> <li>• Report symptoms of a lung infection like a cough, sneezing, runny nose, fever, and scratchy or sore throat to your provider</li> </ul>
<p><b>Fatigue</b></p>	<ul style="list-style-type: none"> <li>• You may be more tired than usual or have less energy.</li> <li>• Stay as active as possible, but know it is okay to rest as needed.</li> <li>• Try to do some type of moderate activity every day.</li> <li>• Conserve your energy. Plan your activities and do them at a time of day when you feel a bit more energetic.</li> <li>• Follow a healthy diet and stay hydrated.</li> <li>• Accept help from family and friends</li> <li>• Find healthy ways to manage stress, such as meditation, journaling, yoga, and guided imagery</li> <li>• Develop good sleeping habits, limit napping during the day to help you sleep better at night.</li> <li>• Avoid operating heavy machinery if you feel too tired.</li> <li>• Contact your care team if you experience extreme fatigue that prevents you from doing your normal daily activities.</li> </ul>
<p><b>Infusion reaction</b></p>	<p>Isatuximab- irfc may cause an infusion reaction. During your treatment, let the nurse know right away if any of these symptoms happen: chills or shaking, dizziness, fever, itchiness or rash, flushing, difficulty breathing, wheezing, sudden back pain, or feeling faint.</p>

## ISATUXIMAB/CARFILZOMIB/DEXAMETHASONE

### Rare but serious side effects

Tell your care provider if you experience any symptoms of these problems:

- Carfilzomib may affect your heart's ability to pump blood. Tell your healthcare provider right away if you experience new or worsening shortness of breath, chest pain, irregular heartbeat, or swelling of your ankles or legs.
- You may be at a higher risk of bleeding while taking carfilzomib. Be sure to seek medical attention right away if you have any major bleeding. Also be sure to check for any signs of bleeding in your stool.
- Carfilzomib may result in serious and fatal lung toxicity. If you start to experience shortness of breath, fatigue, breathlessness, or discomfort/worsening of symptoms while lying on your back, please immediately contact your prescriber.
- These medications may be harmful to your kidneys. Speak to your care team to know when you need to have laboratory tests done to monitor your kidneys.
- A condition called reversible posterior leukoencephalopathy syndrome can occur while taking carfilzomib. Call your care team right away if you have headaches, seizures, confusion or changes in vision.
- These medications may cause a condition called tumor lysis syndrome when starting treatment. This results from the rapid destruction of cancer cells in the body during the initial cycles of treatment. Your care team may do blood tests to check for this side effect.
- Carfilzomib may cause the worsening or development of new liver diseases. Seek medical attention if you notice any changes to your mentality, swelling or bloating of the abdomen, yellowing of the skin, dark urine, or weight gain.
- Call your care team right away if you have headaches, seizures, confusion or changes in vision, as this may be a severe side effect of the treatment.
- If you experience ANY new, worsening, or uncontrolled side effects, call your care team immediately.

## ISATUXIMAB-IRFC/CARFILZOMIB/DEXAMETHASONE

### Handling body fluids and waste

Some of the drugs you receive may be present in urine, stool, sweat, or vomit for many days after treatment. Many cancer drugs are toxic, your bodily waste may also be toxic and can be dangerous to come into contact with. Once you have started isatuximab-irfc, carfilzomib, and dexamethasone, follow the instructions below for at least two days after your treatment. This is to keep you, your loved ones, and the environment as safe as possible.

- Pregnant women should avoid touching anything that may be soiled with body fluids from the patient.
- Toilet and septic systems
  - You may use the same toilet, septic tank, and/or sewer that you usually use. If you have a low-flow toilet, close the lid and flush twice to ensure that all waste has been discarded.
- If the toilet or toilet seat becomes soiled with urine, stool, or vomit, clean the surface after every use before other people use the toilet.
- Wash hands with soap and water after using the toilet for at least 20 seconds.
- If you need a bedpan, be sure your caregiver knows to wear gloves to assist with cleanup and to wash the bedpan with soap and water every day.
- If you do not have good control of bladder or bowels, use a disposable pad with a plastic back, a diaper, or a sheet to absorb body waste.
- Wash any skin that has been exposed to body waste with soap and water.
- Linens or clothing that are soiled with body fluids or body waste should be washed separately from other linens and clothing. If you do not have a washer, place the soiled linens in a plastic bag until they can be washed.
- Wash hands with soap and water after touching linens or clothing that may be soiled with body fluids.

### Intimacy, sexual activity, contraception, and fertility

This treatment may cause changes that can affect intimacy and sexuality, including desire and body image. Maintaining physical closeness and/or intimacy with loved ones can be continued during treatment. Holding hands, hugging, and kissing can be done safely. It is recommended that you talk to your care team about any restrictions or questions you may have.

Some treatments can influence the ability to have children, also known as fertility. If you're interested in preserving fertility, talk to your care team before treatment. Ask your healthcare provider to determine when it is safe to become pregnant after your treatment. Patients of reproductive ability should not become pregnant or get their partners pregnant while receiving isatuximab-irfc, carfilzomib, and dexamethasone. Some of the drugs you receive may be present in semen and vaginal secretion for many days after treatment. You should use barrier devices, such as condoms, during sexual activity to limit exposure to body fluids.

- Talk to your care team about birth control. Not all options may be right for your treatment or cancer. Effective contraception could include one or more of the following: barrier methods (e.g. condoms), hormone methods (e.g. birth control pills), or surgery.
- Tell your care team if you become pregnant or plan to breastfeed.
