

TRABECTEDIN

Name of the regimen and cancer drugs

• Trabectedin (truh-BEK-teh-din): Yondelis

Common uses

This regimen is most commonly used for sarcoma but may be used for other diagnoses, such as ovarian cancer.

Treatment schedule

Your treatment will be given into your vein through an intravenous (IV) line. This may be into a short, flexible temporary catheter in your arm, or through a central venous catheter. A central venous catheter, or central line is a long, flexible IV tube that empties into a very large vein next to the heart. Talk with your care team to see which will be best for you and your treatment.

Each trabectedin treatment is repeated every 21 days. This is known as one cycle. Your treatment may be given for a set number of cycles, or it will keep going until the drug stops working or you have side effects which stop you from continuing treatment.

☐ Trabectedin continuous IV infusion over 24 hours beginning on Day 1 and finishing on Day 2

	Drug	DAY	1	2	3	4	5	6	7	8	9	 21	Cycle 2 Day 1
Trabectedin													

Other medications

Other medications may be ordered for you to prevent or treat certain side effects. These include:

	Instructions:
Anti-nausea medications	You will receive medications to prevent nausea just before your cancer treatment. You may also get prescriptions for other medications to take at home, as below:
Medications to prevent side effects (liver toxicity)	You will receive your medications to prevent side effects just before your cancer treatment. You may get prescriptions for other medications to take at home, as below: Dexamethasone

TRABECTEDIN

Possible drug interactions

- ☐ Trabectedin may interact with other drugs you are taking. Please inform your care providers of all prescription medicine, over-the-counter medications, vitamins, and herbal products that you take.
- ☐ Talk with your care provider or pharmacist before taking new medications, supplements, or receiving any vaccines.
- Grapefruit or grapefruit juice may interact with trabectedin. Avoid eating or drinking these during your treatment

Common Side Effects

Common side effects that have been known to happen in patients receiving trabectedin are listed in the left side of this table. In some instances, the side effects may be reported less often but are still important to discuss. This table does not list all the known side effects for this therapy, only the ones that are experienced most often. Not every patient experiences every known side effect of a drug; even if you are taking the same drug as another patient, you may experience different side effects. Options to help manage any side effects that do occur are included on the right side of this table. These should be discussed with your care provider. If you experience any side effect you cannot manage or that is not listed here, contact your care provider.

Possible Side Effect	Management
Decreased hemoglobin, part of the red blood cells that carry iron and oxygen	Your hemoglobin should be checked by a simple blood test. When your hemoglobin is low, you may notice that you get tired or fatigued more easily. Try to get 7 to 8 hours of sleep per night Avoid operating heavy machinery if you feel too tired Find a balance between "work" and "rest" Stay as active as possible, but know that it is okay to rest as needed, too You might notice that you are more pale than usual Let your care team know right away if you have: Shortness of breath Dizziness Fast or abnormal heartbeat

TRABECTEDIN

Possible Side Effect	Management						
	Your WBCs should be monitored by a simple blood test. When your WBCs are low, you are at a greater risk of having an infection. Take the following precautions to protect yourself from infection.						
Decreased white blood cells (WBCs)	 Wash your hands often, especially before eating and after using the bathroom. Avoid crowds and people with fevers, flu, or other infection. Bathe often for good personal hygiene. 						
and increased risk for infection	Contact your care team if you experience any signs or symptoms of an infection such as:						
IIIIGGUUII	 Fever (temperature more than 100.4°F or 38°C) Chills 						
	Sore throatBurning when peeing						
	Tiredness that is worse than normal						
	A sore that becomes red, is draining, or does not heal.						
	Check with your care team before taking any medicine for a fever or chills.						
	Your platelets should be monitored by a simple blood test. When they are low, you may bruise or bleed more easily than usual.						
	 Use caution to avoid bruises, cuts, or burns. Blow your nose gently and do not pick your nose Brush your teeth gently with a soft toothbrush and maintain good oral hygiene When shaving use an electric razor instead of razor blades Use a nail file instead of nail clippers 						
Decreased platelet	Call your care team if you have bleeding that won't stop. Examples include:						
count and increased risk of bleeding	 A bloody nose that bleeds for more than 5 minutes despite pressure A cut that continues to ooze despite pressure Gums that bleed a lot when you floss or brush 						
	Seek medical help right away if you have any severe headaches, blood in your urine or stool, coughing up blood, or bleeding that you cannot stop or lasts a long time.						
	You may need to take a break or "hold" your medication for medical or dental procedures.						
	Talk to your care team or dentist before any scheduled procedures.

TRABECTEDIN

Possible Side Effect	Management						
Changes in liver function	Your liver function will be checked regularly by a simple blood test. Contact your care team if you notice any of the following. • Yellowing of the skin or whites of your eyes • Dark or brown urine • Bleeding or bruising						
Nausea or vomiting	 Take all medications as prescribed to help prevent and lessen symptoms of nausea and vomiting Eat and drink slowly Drink 8-10 (8-ounce) glasses of water and/or fluid (soup or broth) each day unless your care team has instructed you to limit your fluid intake Eat small, frequent meals throughout the day rather than a few large meals Eat bland foods; avoid spicy, fried, and greasy foods Avoid intense exercise immediately after eating Don't lay down right away after eating Wear loose fitting clothing for comfort Avoid strong odors. Consider getting fresh air and try deep breathing. Let your care team know if you have nausea or vomiting. Your care team may prescribe medication to help with the symptoms. 						
Fatigue	 You may be more tired than usual or have less energy Stay as active as possible, but know it is okay to rest as needed Try to do some type of moderate activity every day Conserve your energy. Plan your activities and do them at a time of day when you feel a bit more energetic Follow a healthy diet and stay hydrated Accept help from family and friends Find healthy ways to manage stress, such as meditation, journaling, yoga, and guided imagery Develop good sleeping habits, limit napping during the day to help you sleep better at night Avoid operating heavy machinery if you feel too tired Contact your care team if you experience extreme fatigue that prevents you from doing your normal daily activities

TRABECTEDIN

Possible Side Effect	Management
Changes in kidney fuction	Your kidney function will be checked routinely by a simple blood test. Contact your care team if you notice any of the following: Decreased amount of urination Unusual swelling in your legs and feet
Decreased appetite or weight loss	Talk to your care team if you notice weight loss while taking this medication. When you do not feel like eating, try: • Small frequent meals instead of 3 large meals each day. • Keep snacks nearby so you can eat when you feel hungry. • Liquid nutritional supplements. • Drink 8-10 glasses of water or fluid each day, especially if you are not eating, unless your care team has instructed you to limit your fluid intake.
Constipation	 Keep track of how many bowel movements you have each day. Drink 8-10 (8-ounce) glasses of water or fluid each day unless your care team has asked you to limit your fluid intake. Stay active and exercise, if possible. Eat foods high in fiber like raw fruits and vegetables. Contact your care team if you have not had a bowel movement in 3 or more days. Your care team may recommend over-the-counter medications to help with constipation. A daily stool softener such as docusate (Colace®) and/or laxative such as senna (Senakot®) may be helpful. If these do not help within 48 hours, tell your care team.
Diarrhea (loose and/ or urgent bowel movements)	Monitor how many bowel movements you have each day. Drink 8-10 (8-ounce) glasses of water or fluid each day unless your care team has asked you to limit your fluid intake. Eat small, frequent meals throughout the day rather than a few large meals. Eat bland, low-fiber foods (such as bananas, applesauce, potatoes, chicken, rice, and toast). Avoid high fiber foods, such as raw vegetables and fruits and whole grains. Avoid foods that cause gas, such as broccoli and beans. Avoid foods with lactose, such as yogurt and milk. Avoid spicy, fried, and greasy foods. Contact your care team if: The number of bowel movements you have in a day increases by 4 or more You feel dizzy or lightheaded Talk with your care team if you believe you have diarrhea. They may recommend an over-the-counter medication or prescribe something to help keep it under control.

TRABECTEDIN

Possible Side Effect	Management
Changes in electrolyte levels and other laboratory values: High creatine phosphokinase	Changes in some lab values may occur and will be monitored by a simple blood test. You may not feel any symptoms if the changes are mild and they usually are not a sign of a serious problem. More severe changes may occur, which can be a sign of a serious problem. Notify your care team if you have any of the following: Shortness of breath Chest discomfort Weakness or fatigue New aches and pains Headaches Dizziness Swelling of your legs or feet Red or brown colored urine
Fluid retention or swelling (edema)	 Do not stand for long periods of time Keep your legs elevated when sitting or lying down Try to not eat salty foods, which can increase swelling Avoid tight-fitting clothing and shoes Weigh yourself daily Take any medications as prescribed to decrease fluid retention Contact your care team if you notice: Swelling in the hands, feet, or legs You are short of breath You have gained 5 pounds or more in one week

Rare but serious side effects

Trabectedin can cause muscle breakdown. Please contact your healthcare professional if you are experiencing severe leg pair
and/or brown, tea-colored urine discoloration.

- ☐ Trabectedin can make your heart work harder to pump blood to the rest of your body. Notify your care team if you experience shortness of breath or chest pain.
- □ Trabectedin is a vesicant. If it leaks outside of the IV, it can cause severe damage to your skin. Notify your nurse right away if you feel any pain, aching, burning, itching, swelling, or redness at the site of your IV.

If you experience ANY new, worsening, or uncontrolled side effects, call your care team immediately.

TRABECTEDIN

Handling body fluids and waste

Some of the drugs you receive may be present in urine, stool, sweat, or vomit for many days after treatment. Many cancer drugs are toxic, your bodily waste may also be toxic and can be dangerous to come into contact with. Once you have started trabectedin, follow the instructions below for at least two days after your treatment. This is to keep you, your loved ones, and the environment as safe as possible.

	e environment as safe as possible.
	Pregnant women should avoid touching anything that may be soiled with body fluids from the patient.
	Toilet and septic systems
	• You may use the same toilet, septic tank, and/or sewer that you usually use. If you have a low-flow toilet, close the lid and flush twice to ensure that all waste has been discarded.
	If the toilet or toilet seat becomes soiled with urine, stool, or vomit, clean the surface after every use before other people use the toliet.
	Wash hands with soap and water after using the toilet for at least 20 seconds.
	If you need a bedpan, be sure your caregiver knows to wear gloves to assist with cleanup and to wash the bedpan with soap and water every day.
	If you do not have good control of bladder or bowels, use a disposable pad with a plastic back, a diaper, or a sheet to absorb body waste.
	Wash any skin that has been exposed to body waste with soap and water.
	Linens or clothing that are soiled with body fluids or body waste should be washed separately from other linens and clothing. If you do not have a washer, place the soiled linens in a plastic bag until they can be washed.
	Wash hands with soap and water after touching linens or clothing that may be soiled with body fluids.
Intim	acy, sexual activity, contraception, and fertility
ph	is treatment may cause changes that can affect intimacy and sexuality, including desire and body image. Maintaining sysical closeness and/or intimacy with loved ones can be continued during treatment. Holding hands, hugging, and kissing n be done safely. It is recommended that you talk to your care team about any restrictions or questions you may have.
tal yo tra	ome treatments can influence the ability to have children, also known as fertility. If you're interested in preserving fertility, k to your care team before treatment. Ask your healthcare provider to determine when it is safe to become pregnant after ur treatment. Patients of reproductive ability should not become pregnant or get their partners pregnant while receiving abectedin. Some of the drugs you receive may be present in semen and vaginal secretion for many days after treatment. Yo ould use barrier devices, such as condoms, during sexual activity to limit exposure to body fluids.
	Talk to your care team about birth control. Not all options may be right for your treatment or cancer. Effective contraception could include one or more of the following: barrier methods (e.g. condoms), hormone methods (e.g. birth control pills), or surgery.
	Tell your care team if you become pregnant or plan to breastfeed.
